

Anypoint Platform Architecture: Application Networks

Setup Requirements

To get the student files for the class, you need:

- 1. A MuleSoft Learning Management System account**

<http://training.mulesoft.com/login.html>

The MuleSoft Learning Management System (LMS) hosts all of the resources, links, and files for the class. When your registration for class is confirmed, you will receive an email with information to access the LMS. Before class, make sure you can successfully log in to the LMS.

You will get access to the course materials right before class starts and will download them with your instructor.

If you are taking an online class, you also need:

- 2. The ability to use WebEx**

For operating system and browser requirements, see:

<https://help.webex.com/docs/DOC-4748>

To test your browser and install the necessary browser plugin, follow the instructions at:

<http://www.webex.com/test-meeting.html>

- 3. VoIP capabilities or a telephone**

Using voice over IP (VoIP) is recommended although WebEx also provides integrated telephone conferencing in some regions.

- 4. A headset**

A headset is highly recommended but if you do not have one, be sure to have good computer speakers and a microphone.
